SQL DATABASE

"I only wish this software had been first available when I started in this business"

- Tony Dodge, owner Tom's Video

The System You'll Need Tomorrow, Is Here Today.
(Goodbye Yesterday, Hello Tomorrow)

User Friendly Graphical Screens
(Goodbye brutal text screens. No more training nightmares).

Windows. Browser Based, SQL Databases
(Goodbye re-building files and indexes).

Network Ready
(Goodbye Novell/Lantastic administration, costs and problems. Simple TCP/IP plug-in networking).

The System that grows with your business.
Multi-Site - Central Database.
(Goodbye additional systems for new stores. Add on new stores onto the database, use low cost Internet for networking the stores).

Real Time
(Goodbye day-end processing. Hello real-time stats).

The System You'll Need Tomorrow, Is Here Today.

Centralized Customer Information. Available Real Time.

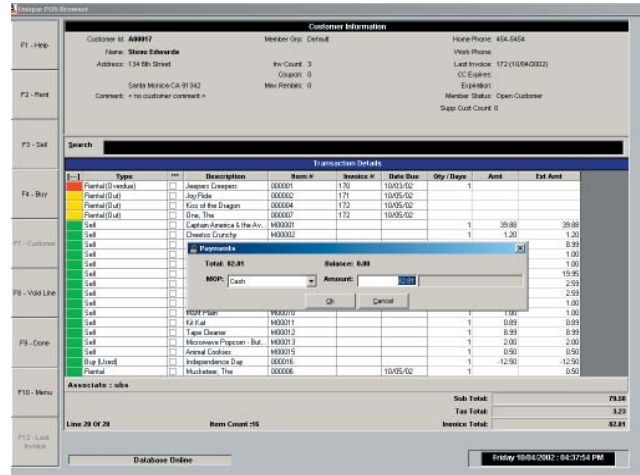

Now your customer's information is available at every store - in real time. No more day-end processing - all stats are real time. It's even better if you have multiple stores. Customers can rent from any store. Each store has real time information about every customer, including late charges, delinquency or items rented.

Tailor-Made Systems at Every Station.

Flexible, Highly Configurable system so that the user sees only the functionality that is relevant for your store or even for the particular workstation. For example, you can have a station with only Game-Trading functionality, another with Video-Rental and Game Trading and yet another with Game-Trading, Video Rentals and Sales.

Built-In Custom Report Writer.

Now get the information you want in minutes. Build and save your own reports with only the information you want.

Account Management Made Easy.

See all items outstanding to an account (including supplemental customers). Information includes outstanding rentals, late fees etc.

Windows - but no need to use a mouse.

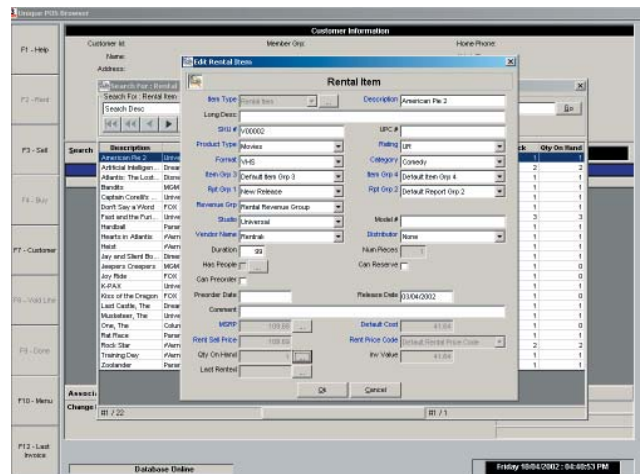

Most windows systems need to be operated with a mouse. This slows down transactions and occupies valuable counter space. But with V3 Plus you don't have to use a mouse, making it the fastest, leanest system out there.

Centralized Infrastructure. Lower Costs, Fewer Problems and Total Control.

Slash maintenance and system management costs. You only need to manage one central system instead of individual systems at every store.

Email Reports.

Easily email certain financial reports to a central location nightly.
